

Antari S-200X Snow Machine

Description

The Antari S-200X Snow Machine has a PCB and advanced pump for reliability and can generate up to 50% more snow output than its predecessor (S-200). The S-200X has sound isolation technology which allows it to run 50% quieter than the S-100X, and can create both a romantic snow and astonishing blizzard effects, while keeping its working noise level much lower, making it great for environments where quiet operation is required. Can be easily hidden from audience view with its built-in yoke or set-up on the ground. Controlled via DMX or the SC-2 remote provided with the on/off and output volume controls.

Features:

- Fluid tank slot
- Built-in yoke
- Variable output from 10-100%
- 25' wired remote for far away operation
- DMX controllable
