Silent Cat Camera Slider 4'

The Silent Cat™ 5000 Camera Slider is 59” inches long and allows a 47” travel.

When space isn't a concern the Silent Cat™ 5000 offers considerable travel before you need to lay a piece of track. It is especially useful for camera movement in the hard to get to location i.e. attics, stairs, woods, the beach, etc. You can reposition the camera and track out of doorways and corners with ease.

The Silent Cat™ 5000 offers many more options to mount to a Standard Mitchell Mount. There are eleven mounting positions to choose from when mounting to a camera dolly or any Standard Mitchell Mount*.

Use the custom counter weight tray whenever you can to lever the Silent Cat™ 5000.**

Switching from top mounted to under slung is fast and requires no tools.

The Silent Cat™ 5000 is the ONLY camera slider that can under sling directly off of the camera dolly.

This allows the camera lens to be as low as possible to the scene.

Silent Cat Dimensions: 59.5” x 10”

Track Length: 57.5”

Weight: 44 lbs
